

OBJECTIVE

An enthusiastic and driven student eager to pursue a career in data, software, and AI/ML in automotive applications. Skilled at analytical/quantitative problem solving, written/verbal communications, and organizational ability.

EDUCATION

Texas A&M University, College Station, TX – *College of Engineering, Class of '26*

Junior Honors Student, Pursuing BS in Computer Science w/ Minors in Electrical Engineering & Mathematics

GPA: 3.761

Financed 100% of college education through merit scholarship awards.

Uplift North Hills Preparatory, Irving, TX – *Class of '22*

International Baccalaureate Diploma

Weighted GPA: 4.61 - Ranked 3rd of Graduating Class

TECHNICAL SKILLS

- **Languages:** C++, Python, Java, Scheme, Assembly, Ladder Logic, HTML/CSS, PostgreSQL, Javascript, React.js
- **Coursework:** Software Engineering, Object Oriented Programming, Data Structures & Algorithms, Linear Algebra, Discrete Math, Probability & Statistics, Differential Equations, Computer Organization, Computer Systems
- **Other Skills:** Machine/Deep Learning, Computer Vision, Transformers/NLP, Operational Technology, Embedded Software, AWS Databases, CUDA, Arduino/Nucleo, Linux/Unix, Altium, PCB Design, Language Models/Gen AI

EXPERIENCE

ENDEAVR Institute – *Autonomous Driving Research Intern:*

October 2024 – Present

- Developed Python scripts for real-time video capture and preparation, enabling remote autonomous driving
- Agile team environment of 4 interns building software, converting old vehicles into autonomous service vehicles
- Contributing to a scalable, remotely monitored autonomous rescue and emergency service vehicle platform.

Institute for a Disaster Resilient Texas – *Research Project:*

September 2024 – Present

- Collaborative, multidisciplinary team at various levels of academia, to research and develop vision models
- Leveraged Gen AI techniques for performing image analytics for natural disaster damage classification
- Combined techniques in NLP & Vision for image analytics & image-to-text generative models.

Texas A&M Sketch Recognition Lab – *Research Project:*

June 2024 - Present

- Collaborated with PhD student to test & evaluate novel computer vision techniques from published research
- Iterative research on Convolutional frameworks for medical imaging, using segmentation & classification
- Experimented to improve efficiency & accuracy by changing parameters, model architecture, and loss functions

Texas A&M Cybersecurity Lab – *ICS Engineer*

Nov 2023 - Present

- Researched and augmented industrial automation via OT, IT, ladder logic, and PLC's.
- Developed scenes and control logic for OT environments, researched ML for anomaly detection

ACTIVITIES

Texas A&M Solar Car Racing Team

Oct 2022 - Present

- Worked with CAN bus, Microelectronic Software, PCB Design & Verification for endurance racing.
- Developed & implemented control systems & algorithms for vehicle strategy using car & environmental data
- Finished 7th of 42 teams in the American Solar Challenge & Formula Sun Grand Prix 2024

Aggie Data Science

Sept 2022 - Present

- Learned fundamentals of Data Science, AI/ML, and LLMs
- Worked in Agile team environment to develop telemetry system for TAMU Formula Electric Team

VICEROY Scholar

Jan 2024 - Present

- Virtual Institutes for Cyber and Electromagnetic Spectrum Research and Employ
- Received stipends for research & coursework in data science, cryptography, and cybersecurity

HONORS

- Craig & Galen Brown Foundation Scholar
- Texas A&M University & Engineering Honors
